

Detail-oriented mixed-methods researcher in Human-Computer Interaction, specialising in immersive XR and spatial computing. Directed end-to-end research at Logitech, collaborating with Meta on the MX-Ink mixed reality stylus. Highly technical and adaptable in fast-changing environments, extracting actionable insights from complex quantitative and qualitative data. Excels at stakeholder management and translating research into strategic narratives to drive user-centric hardware and software roadmaps.

Skills

- Research Methods

▶ Mixed-Methods Research, Usability & Concept Testing, User Studies, Interviews, Focus Groups, A/B Testing, Surveys, Attitudinal Studies
- Data & Statistical Analysis

▶ Quantitative Analysis, Qualitative Analysis, ANOVA, T-tests, R, Python, NumPy, Content Coding, Excel
- Research Tools

▶ Advanced capabilities in Qualtrics, NVivo, LaTeX
- Development & Prototyping:

▶ Immersive XR, Spatial Computing, Unity Game Engine, C#, Rapid Prototyping, Figma, Adobe XD, Git, GitHub
- Collaboration

▶ Stakeholder Management, Cross-functional Collaboration, Research Communication, Problem-Solving, Crisis Management, Public Speaking

Work Experience

- Extended Reality Research Intern, Logitech

 Cork, Ireland

Jun-2024 – Oct 2024 | Skills: User Studies, Prototyping, Concept & Usability Testing, Statistics, Stakeholder Communication

▶ Moderated usability tests and user studies consisting of 15 to 20 participants each, extracting actionable UX insights by observing how stylus grip affects spatial interaction.

▶ Proved the MX-Ink mixed reality stylus’s greater precision compared to the standard controller, executing end-to-end custom primary research, concept testing and statistical analysis.

▶ Translated complex mixed-methods data into strategic narratives for cross-functional design and engineering teams, directly driving firmware updates (optimising double-tap registration timings) to improve input reliability.
- Research Assistant - Immersive Interaction, University of Glasgow

 Glasgow, Scotland

Aug-2025 – Feb-2026 | Skills: Usability Testing, Prototyping, Development, Quantitative & Qualitative Analysis, Data Analysis

▶ Conducted in-depth data analysis for large-scale user studies (~50 participants), structuring and tagging complex visual datasets to deliver quantitative and qualitative insights.

▶ Navigated ambiguous technical constraints across 3 distinct projects, rapidly pivoting hardware setups (Meta Quest and Apple Vision Pro) and adapting analysis methodologies to ensure robust data delivery against strict project deadlines.
- Digital Skills Project Research Assistant (Part-time), Digital Skills Education Limited

 Glasgow, Scotland

Jun 2020 – ... | Skills: Teaching, Public Speaking, Prototyping, Stakeholder liaison, Research Communication

▶ Organise monthly workshops for an average of 20 participants, teaching complex computer science topics, achieving high satisfaction rates.

▶ Directed user-centred design methods to research, prototype, and test novel ways of communicating technical concepts to diverse (technical and non-technical audiences).

▶ Collaborated with key stakeholders to present research findings, shaping upcoming projects.

Work Experience (continued)

- **Assistant Technical Program Chair (Volunteer), CHI 2024, (ACM) SIGCHI**  Honolulu, USA
Aug 2022 – May 2024 | **Skills:** Large scale project management Problem-Solving, Management, Crisis Management
 - Helped direct a volunteer team of 100+ members across several months, ensuring the smooth execution of the technical programme for a conference of 4000+ attendees.
 - Facilitated stakeholder management as the primary liaison between key stakeholders (ACM, sponsors) and the lead organising committee.

Education

- **PhD in Human-Computer Interaction, University of Glasgow**  Glasgow, Scotland
Oct 2021 – Apr 2026 | **Skills:** User Studies, Usability Testing, Interviews, Quantitative/Qualitative Analysis, Prototyping, Coding
Thesis: Designing Efficient Interaction Techniques for Mid-Air Gesture Interfaces
 - Investigated fundamental principles of 3D navigation by evaluating both behavioural ergonomics (fatigue, precision) and attitudinal metrics (user adoption), testing novel interaction techniques to optimise UX.
 - Addressed core challenges of spatial computing by designing, implementing (Unity) and running multiple user studies, conducting in-depth interviews, and usability testing sessions.
 - Proposed design recommendations for touchless interfaces, translating complex spatial data into actionable design guidelines.
 - Invited as a keynote presenter at Ultraleap, discussing spatial interaction research to industry professionals.
 - Generated actionable spatial computing insights that were acknowledged and integrated into official Ultraleap developer guidelines (LeapMotion), impacting the broader XR ecosystem.
- **MSc by Research - Human-Computer Interaction, The University of Edinburgh**  Edinburgh, Scotland
Sep 2020 – Sep 2021 | Merit | **Skills:** User-Studies, Usability Testing, Quantitative Analysis, Qualitative Analysis, A/B Testing
Thesis: Don't Touch Me! An Exploration of Interface Design for Touchless Systems
 - Designed and executed behavioural and attitudinal studies (surveys and in-depth 1:1 interviews) to evaluate user sentiment, comfort, and trust when interacting with touchless public displays.
 - Formulated design recommendations for touchless interfaces, identifying how users translate 3D movements into on-screen actions, explicitly identifying suboptimal UI widgets to avoid.
- **BSc Computer Science, The University of Edinburgh**  Edinburgh, Scotland
Sep 2016 – Sep 2020 | First Class
 - Thesis explored navigation for visually impaired pedestrians, gathering user requirements through focus groups and systematic reviews to inform the development of a smartphone application.
